Animal Shelters in 2060

Animal shelters all over the world are having problems but, I believe that in the years to come they could have less and less every day.

When new animals arrive at the shelter the employees tend to find out what breed they are and if they have a microchip. Doing this usually takes up quite a bit of time but imagine if you could do in just a few seconds. With lots of new technology being invented in 2060 this idea will be no problem. The revelier scans the creature when they arrive and checks for microchips and what breed they are in a matter of seconds. It also takes a picture and immediately posts it on every animal rescue sight in the area.

Once a day all animals will be able to interact with each other while the sprinkler 2.0 is at work. Most animal shelters aren't very clean because the employees don't have time to do it every day. The sprinkler 2.0 comes out of a compartment in the ceiling and sprays all of the holding areas with soapy water. Once the cleaning process is finished the sprinkler 2.0 will flip and turn into a dryer and dry everything completely off.

Most animal shelters have a lack of public awareness but the projectadrone has a solution. The projectadrone goes out to the public and projects advertisements for the animal shelter. It also projects all the locations of the animal shelters in the city/town and it projects some of the animals up for adoption. If the projectadrone runs out of battery it will

immediately fly back to its charging base. The projectadrone has a tracking device built in it just in case it ever broke down... If it did break down the animal shelter would track it down and send someone to retrieve it.

As you can see There are so many ways that people could help animal shelters and these are just a few. I believe that in 2060 there will be so many fantastic changes to animal shelters.
